LEGO® Education Coding Express

Early learning is where it starts! Make your train pause, stop, change direction, sound the horn, and more! Taking the familiarity of a train and combining it with the new action bricks, early learners will learn through play about sequencing, looping, conditional coding, and cause and effect by placing the new action bricks within the train's track. Each action brick creates a specific action allowing for students to test and redesign ways to problem solve and work together to get their train to its destination.

LEGO® Education

Introducing the LEGO® Education Learning System

Future-proof your students' skills, and make them confident life-long learners by giving them unlimited possibilities for hands-on, playful STEAM learning with the new LEGO® Learning System.

With a range of interconnected solutions that work seamlessly together, the Learning System makes STEAM learning easier to implement at the classroom, school and district levels.

The LEGO Education SPIKE™ Portfolio

Premium, technology-enhanced STEAM solutions.

The LEGO Education SPIKE™ Portfolio encourages broad STEAM learning and the application of computational thinking with a focus on coding, technology, and digital integration.

BricQ Motion Essential

BricQ Motion Prime

LEGO Education BricQ Motion Portfolio

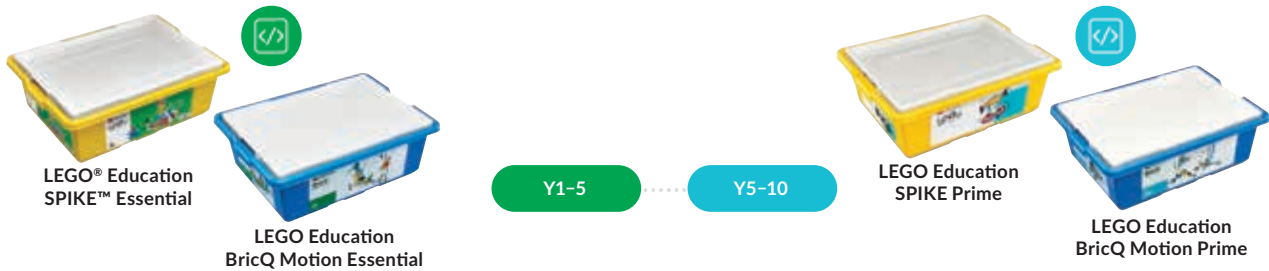

Non-tech solutions with a focus on physical science.

LEGO Education BricQ Motion provides a foundational understanding of physical science concepts and an analog introduction to computational thinking.

LEGO Learning System

Interconnected Solutions That Work Seamlessly Together

The easy-to-adopt LEGO® Learning System offers solutions that work with or without technology. Implement the full system at once or introduce individual solutions over time.

- **Curriculum**
Engage all students with playful STEAM curriculum units.
- **Bricks**
Build, tinker and experiment with a system of LEGO bricks and elements.
- **Programming**
Learn and apply coding principles within a STEAM context.
- **Hardware**
Expand learning opportunities with LEGO hardware elements.
- **Professional Development**
Develop teachers' confidence and competence.

STEAM it up in 2025 with a LEGO® Education Loan Kit & Power Up with Professional Learning!

STEAM learning is when those hungry minds use both critical and creative thinking to problem-solve and collaborate. Are you keen to activate some fun, hands-on STEAM ideas in your classroom? MTA makes this super-easy with free trials of LEGO® Education and free Professional Learning webinars and workshops.

The LEGO® Learning System

This unlocks the power of learning through engaging activities with comprehensive curriculum-aligned lesson plans, introductory materials, teacher support and professional development.

Even better, the easy-to-adopt LEGO® Learning System prepares your students to become confident lifelong learners in this ever-changing world shaped by technology.

Try LEGO® Education for free for 30 days!

- Borrow a kit for free for 30 days
- Open to all schools across ANZ
- Choose from:
 - SPIKE™ Essential
 - SPIKE™ Prime
 - BricQ Motion Essential
 - BricQ Motion Prime
- Each kit comes with hours of lesson plans & units and a handy getting started guide

LEGO® Education SPIKE™ Essential

Block-based programming for each age and skill level

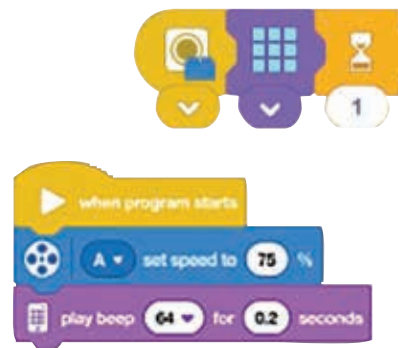

With SPIKE™ Essential, students can progress all the way from lower to upper primary. The two programming options allow for age and skill appropriate learning and coding proficiency development.

Icon-based Block Coding

Starting with icon-based block coding, students need minimal skills in reading and writing.

Word-based Block Coding

Once they progress, they can move on to word-based block coding, creating more precise programs, accurate.

Teacher Resources included with SPIKE Essential

Get Started

After you purchase your solution, getting started is easy! Find tutorials in an easy to follow flow:

LEG45345-15S	With storage	\$6,990.95
LEG45345-15SC	With charger & storage	\$7,271.45

The SPIKE Prime Unit plans consist of 5 unit plans to help students develop the abstract and critical thinking skills they need to solve complex problems. The curriculum-aligned lessons provide a variety of learning experiences that relate directly back to students' real-life questions and observations, building their confidence and preparing them for life beyond school.

Each curriculum unit includes:

A unit-wide theme across all lessons in the unit

A learning sequence with 1 unit starter + A set of guided practices + 1 open project to end the unit

6-8 lessons in total 45 min. each (open project 2x45min.)

Additional 30+ min. literacy & maths extensions for each lesson

6-10 hours of content per unit

Invention Squad

- Apply engineering design skills to each step of the design process
- Define a problem with success criteria, make different prototypes, establish systematic testing procedures
- Analyse data to improve the solution
- Describe why the final solution is the best option

STEM – Engineering

6

Kickstart a Business

- Develop effective problem-solving skills by decomposing problems into smaller parts
- Use pseudocode as tool for sequencing actions
- Use existing code with attributes to recognise patterns
- Systematically identify and fix bugs
- Use conditions and compounds to program encoded devices

STEM – Computer Science – Coding

7

Training Trackers

- Construct, analyse and/or interpret graphical displays of data
- Describe the relationship between types of energy (i.e. metabolic, potential and kinetic) and an object's acceleration
- Illustrate the amount of energy stored in a system
- Practise finding mathematical relationships and play with statistics and probability
- Consider limitations of data analysis and seek to improve the precisions and accuracy of the data by using better technological tools and methods

Science – STEM

7

Life Hacks

- Create clearly-named variables and lists representing different data types
- Perform basic maths operations on their values
- Make cloud data useful and reliable
- Improve programs in order to refine solutions
- Design projects that combine hardware and software components to collect and exchange data

STEM – Computer Science – Coding

8

Competition Ready

- Introduce students to the world of robotics competitions
- Learn the basics of building and programming autonomous robots using sensors
- Systematically test and refine programs, use the design process to develop solutions
- Develop collaboration and teamwork skills

STEM – Engineering – Computer Science

8

LEGO® Education SPIKE™ Prime

Intuitive Drag-and-Drop Coding based on Scratch

The core LEGO® Education SPIKE™ Prime coding experience is based on Scratch. Scratch is a popular coding language used by millions of people around the world. It provides coding progression with easy entry at any skill level, helping your students think creatively, reason systematically, and work collaboratively – essential skills for life in the 21st century.

Explore Text-Based Coding with Python

LEGO Education SPIKE Prime lets your students dip their toes into text-based coding with a beginner-friendly Python experience. Python is a coding language widely used in robotics and it lays a strong foundation for tackling more advanced topics like algorithms, data structures, machine learning, and artificial intelligence.

Teacher Resources included with SPIKE Prime

Get Started

After you purchase your solution, getting started is easy! Find tutorials in an easy to follow flow:

- Introduction

- Unboxing
- Hands-on
- Get the app

Resources

We have FAQs, teacher guides, software and videos that will provide what you need to get the most out of our solutions for your students.

Professional Development

LEGO® Education courses provide teachers the opportunity to experience lessons from a student's perspective, master classroom management, and explore best practices in classroom implementation. Courses support ongoing teacher training and development needs.

LEGO® Education SPIKE Prime

The LEGO Education SPIKE Prime Set is the go-to STEAM learning tool for students in years 5-10. Combining colourful LEGO building elements, easy-to-use hardware, and an intuitive drag-and-drop coding language based on Scratch, SPIKE Prime continuously engages students through playful learning activities to think critically and solve complex problems, regardless of their learning level. From easy-entry projects to limitless creative design possibilities, including the option to explore text-based coding with Python, SPIKE Prime helps students learn the essential STEAM and 21st century skills needed to become the innovative minds of tomorrow, all while having fun! Includes access to a comprehensive online library of STEAM unit plans, each comprising of multiple lesson plans and activities.

LEGO Education SPIKE Expansion & Sensors Kit

The LEGO Education SPIKE Expansion & Sensors Kit is the perfect addition for your classroom LEGO Education SPIKE Prime sets. This kit includes: 4 x LEGO Education SPIKE Expansion Sets, 2 x Distance Sensors, 2 x Medium Angular Motor, 2 x Force Sensors, 2 x Large Hubs, 1 x Colour Sensor, and 1 x Distance Sensor.

LEG45680K

\$1,999.95

LEGO® SPIKE Technic Colour Sensor

This sensor has the ability to distinguish between 8 colours and measure reflected light. A high-accuracy sample rate of 1kHz offers consistent and accurate data for repeatable results.

LEG45605

\$44.95

LEGO® SPIKE Technic Force Sensor

Measures pressures of up to 10 Newtons (1kg) and can double up as touch sensor with pressed, released or bumped detection. Accurate measurements repeatable results and reliable data collection.

LEG45606

\$37.95

LEGO® SPIKE Technic Distance Sensor

The programmable 'eyes' of your model, this sensor detects sound waves with a 1-200cm range and 1° accuracy. With integrated 6-pin adapter for third party sensors and boards.

LEG45604

\$77.95

LEGO® Education SPIKE™ Prime

LEGO® SPIKE Technic 3 x 3 Colour Light Matrix

A programmable light matrix capable to turn on each segment separately and in 10 different colours, and dimmed in 10-step increments. Transitions can be instant, faded or swiped. Wire length: 250 mm.

LEG45608 \$56.95

LEGO® SPIKE Technic Small Angular Motor

Designed to function both as motor and sensor. Using the integrated rotation sensor, the motor can report both speed (in % of max design speed), relative and absolute position (in %) as well as sense direct user input.

LEG45607 \$71.95

LEGO® SPIKE Technic Medium Angular Motor

The integrated rotation sensor allows for true straight-line control. With absolute positioning and 1° accuracy. Ideal for lower load, fast response applications. Low profile for where space is limited.

LEG45603 \$73.95

LEGO® SPIKE Technic Large Angular Motor

The ideal motor for high-power, high-torque applications, featuring an integrated rotation sensor, absolute positioning and 1° accuracy. Quickly fasten the motor to any build with the Technic built geometry.

LEG45602 \$79.95

LEGO® SPIKE Technic Small Hub

The programmable control unit for SPIKE™ Essential, to control motors and sensors. With 2 input/ output ports, gyro sensor, one button interface and connectivity via Bluetooth or USB cable. Programmable with both block-based and text-based coding.

LEG45609 \$329.95

LEGO® SPIKE Technic Large Hub

The programmable control unit for SPIKE™ Prime, to control motors and sensors. With 6 input/output ports, customizable 5x5 light matrix, gyro sensor, one-button interface and connectivity via Bluetooth or USB cable.

LEG45601 \$445.45

LEGO® SPIKE Technic Large Hub Battery

Designed to be used in combination with the Large Hub (LEG45601). Use this rechargeable lithium-ion battery as an additional battery or replacement battery for your SPIKE Prime set.

LEG45610 \$107.95

LEGO® SPIKE Technic Small Hub Battery

Designed to be used in combination with the Small Hub. The 620 mAH lithium-ion polymer battery is charged via USB cable. Use as additional battery or replacement battery for your SPIKE Essential set.

LEG45612 \$103.95

Power Supply for Raspberry Pi Board

Power your Raspberry Pi Build HAT projects. This 48W power supply* will power the Build HAT and connected LEGO® Technic motors, as well as your Raspberry Pi computer. *3rd Party Product.

ELE10362 \$29.95

Raspberry Pi Build HAT

The Raspberry Pi Build HAT* is an add-on board designed in collaboration with LEGO® Education to make it easy to control LEGO® Technic™ motors and sensors with Raspberry Pi computers. *3rd party product.

ELE10358 \$51.45

LEGO Education BricQ Motion Essential Set

The LEGO® Education BricQ Motion Essential set is a screen-free solution to engage students in the exploration of physical science within a sports context. Learn about forces, motion, and interactions with real-life and relevant examples. Students will experience cool 'aha' moments as they set their bricks in motion. The 523-piece set includes a variety of elements specially designed to practice with physics, while incorporating engineering and math's concepts. With unit plans included – one for lower and one for upper primary – there are many activities readily available to integrate STEAM into the classroom, straight out of the box! They include everything from engaging videos, printable worksheets, lesson plans, assessment rubrics and cross-curricular extensions.

Rechargeable Bee-Bot

Bee-Bot is now rechargeable and can interact with other Bee-Bots and Blue-Bots! Supplied with USB lead, Bee-Bot can either be recharged via your computer or a wall socket with a USB mains adaptor, or using the docking station (TTSB0358) sold separately.

Key Features

Record Audio

Record your own sounds and play them back when commands are entered

Audio Playback

Play audio when Bee-Bot follows commands

Robot Communication

Interact with other Bee-Bots and Blue-Bots in the classroom

Rechargeable

Bee-Bot comes with USB cable to charge via laptop or PC, or USB mains adaptor (not included)

200 Steps

Program up to 200 steps for Bee-Bot to perform!

Screen-Free

All programming is done on the top of the Bee-Bot, no need for software or devices

Robust Design

Made for classroom use, Bee-Bot is durable and child-friendly

Cross-Curricular

Cross-curricular mats available with 15x15 cm grids, Bee-Bot can be used to implement key core concepts

Blue-Bot Bluetooth Floor Robot

The Bluetooth Enabled Floor Robot for Young Students.

Key Features

Clear Shell

See what's inside of the robot!

Screen-Free Option

Program up to 200 steps with the buttons on its shell and make it turn in 90-degree angles in 15cm steps.

Bluetooth Enabled

The option to program Blue-Bot with the Blue-Bot app or Blue's Blocs on your device

Introduce Angles

Besides 90 degree turns, Blue-Bot is also capable of making 45 degree turns when programmed with the Blue-Bot app.

Record & Play Back Sounds

Record your own sounds and play them back to confirm when commands are entered or when Blue-bot follows commands.

Interact with Other Robots

Blue-Bot can interact with other Blue-Bot's and Bee-Bot's it passes along the way.

Rechargeable

Blue-Bot comes with USB cable to charge via laptop or PC, or USB mains adapter (not included)

Robust Design

Made for classroom use, Blue-Bot is durable and has a child-friendly design.

Software

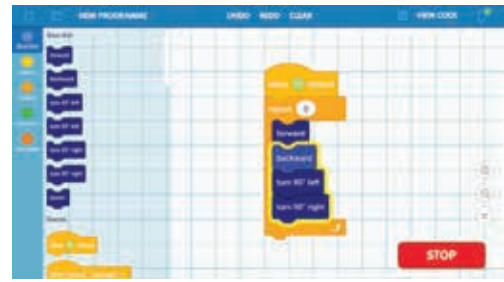

Blue-Bot can be programmed with two apps: Blue-Bot App and Blue's Blocs.

Blue's Blocs

Blue-Bot can now be programmed with the familiar block-based programming language. It allows students to extend the functionality of the robot and improve their knowledge about decision making numerical functions and the introduction of variables.

Blue-Bot App

The Blue-Bot app replaces the buttons on the shell of the robot and adds some more functions such as the 45-degree steps. Give Blue-Bot instructions by dragging and dropping the desired command and select one of the many virtual mats to your program.

Bee-Bot & Blue-Bot Trailer

This easy-to-use trailer is great for incorporating role play and retrieval exercises into your lessons. Although limited to 90 degree turns at a time (Bee-Bot & Blue Bot turning circle), the trailer still enables Bee-Bots & Blue Bots to tow objects with ease.

TTSB1100

\$99.95

Loti-Bot

Loti-Bot

The Loti-Bot is designed for students aged 7-11 years and features programmable movement with highly accurate drawing capabilities and a variety of inputs and outputs. Loti-Bot is the perfect bridge for early programming in conjunction with Bee-Bot and Blue-Bot. Using a Bluetooth-connected tablet and the TTS Loti-Bot app, students can progress from a controlled environment to a junior programming environment to a block-based programming environment - providing a wide spectrum of differentiation for your classes.

Key Features

- Programmable colour LEDs
- Programmable bumper sensors
- Programmable proximity sensors
- Adjustable pen holder
- Microphone
- Speaker
- 20 pre-loaded sounds
- Buddy Detection Sensor (which detects other Loti-Bots, Blue-Bot and Bee-Bot!)
- Cliff sensor – prevents Loti-Bot from falling off the edge of the table
- Graduated Programming Environment which can be adapted to the ability of your students

Software Features

Allows for a variety of coding techniques including junior block based to Scratch block-based coding. Includes an easy to use app.

Robot Mats

3+ yrs only at MTA

MTA Robotics Farm Mat

Students will love learning about the farm life and robotics with this cute and colourful farm themed robotics mat. Introduce students to different animals, crops and how they are grown. This mat includes 10 different types of animals including cows, chickens, pigs and many more!

TEB6225 100 cm x 100 cm

\$82.45

Australia & New Zealand MTA Robotics Mat

Explore Australia, New Zealand and their landmarks and animals with this MTA robotics mat. This cute and colourful mat includes the major cities of both Australia and New Zealand

TEB6227 Vinyl 115 x 85cm

\$82.45

3+ yrs only at MTA

MTA Robotics Pirates Mat

The MTA Pirate themed robotics mat has been designed to spark curiosity and engagement within your students. Students will also improve their story-telling skills while learning about direction and robotics. Use this mat with any of the robotic resources you already have in your classroom such as Fliprobot, Photon or even the bee bots!

TEB6226 100 x 100 cm

\$82.45

MTA Junior Robotics Money Mat

This Australian Money Mat helps students to practise with counting money, and recognise Australian coins and notes. By using this mat in combination with the Bee-Bot or Blue-bot, you can combine digital technologies and mathematics, all in one lesson plan! The Mat is made of synthetic paper.

TTSB016 60 x 75cm

\$82.45

4+ yrs only at MTA

MTA Shape Colour & Size Robotics Mat

Use this MTA Shape Colour and Size Robotics Mat to help your students to recognise shapes, colours and size. There are 36 squares each with one shape in it, the mat includes 6 different colours, 6 different colours (Blue, Green, Red, Orange, Yellow, Teal) and 2 different sizes.

TEB6228 Vinyl 100 cm x 100 cm

Botzees

SAVE 12%

Botzees Buidling Blocks Robot

Botzees Classic combines robotics and programming with engineering and augmented reality. Suitable for students in years K to 3, Botzees can be programmed to light up, make sounds and explore the AR world. Each set includes 130 uniquely shaped building blocks to build different models.

Key Features

Main Control Block

The brain of your Botzees! The main block connects to all other electric components.

Ultrasonic Sensor

Used to identify distance and detect obstacles.

Programmable Light

Let Botzees light up in different colours.

Speaker

Botzees can make sounds while exploring the AR world.

Bigger Building Blocks

The blocks with rounded corners are more suitable for younger students.

Software Overview

Botzees Classic can be programmed by two apps. Through interactive AR puzzles and multiple engaging coding games, students without programming experiences can have great coding fun!

PAT83101	Each	\$205.95
PAT83101-4	Set of 4	\$749.95
PAT83101-8	Set of 8	\$1,488.95

Botzees Robotics – Connect Kit

Botzees Connect features a combination of intelligent building blocks. Through RF connection, the three intelligent parts of sound, light and servo will add infinite fun to basic build combinations and spark students' imagination and creativity. The wireless connection allows students to be flexible with their builds and create distance between blocks.

PAT83100	\$123.95
-----------------	-----------------

Botzees Colour Sensor Add-On Kit

This Add-On kit for the Botzees Classic set includes 1 colour sensor block and 108 new block pieces, 10 AR object or character cards and 2 physical play maps to develop and create new stories. It opens up 15 new levels in the app, and you can design your own AR characters for storytelling.

PAT83106	\$59.95
-----------------	----------------

Cubetto – The Coding Robot

Cubetto is a playful wooden robot that helps young children discover programming through storytelling, adventure and collaboration. Taking coding away from the screen, and using a hands-on, block-based programming language, Cubetto is the first coding toy of its kind to work without a screen or digital interface. This means it can allow children to learn to code before they can even read or write!

Key Features

Screen-free

Cubetto can be used without the need for a device.

Tactile and hands-on

Cubetto is programmed by placing the coding blocks onto the coding board.

Coding Blocks

Each coding block is an action, to give instruction to Cubetto and learn about computational thinking.

Storytelling

Get students' creativity flowing while they enter Cubetto's world and go on adventures through different worlds.

Cross-Curricular

The different add-on maps facilitate cross-curricular learning.

Compatibility

Cubetto moves in 15cm steps, making it compatible with all Bee-Bot and Blue-Bot mats.

KUBO

4+ yrs

KUBO Coding Core Set

KUBO is the ideal robot to teach computational thinking and coding without the need for a screen. Suitable for students in years K to 5. Give KUBO commands by letting him drive over the TagTiles included.

Key Features

Screen-Free

Use the TagTiles to create sequences, loops, functions and subroutines in simple, logical steps, without the need for a screen

Two Ways of Coding

Place the TagTiles in a 'puzzle-formation' and let KUBO drive and follow the tiles simultaneously, or place them in straight sequence for KUBO to read, remember and perform at a later stage

Add-On Sets

Become advanced coders by adding more complex TagTiles with Coding+ and Coding++, or implement maths concepts with Coding Math

Desktop Robot

KUBO's small size and small steps make it possible to use the robot on desks. No need for large amounts of floor space!

Software Overview

Subscribe to KUBO Play (sold separately) to manage your classroom and access the online playground.

KB1014 Coding+ Set - K-Year 2 **\$144.45**

Intelino Smart Train

Key Features

Optical Speed Sensor

Tracks the speed of the train and helps maintain a consistent speed regardless of the train's load

Magnetic Steering System

Enables the train to steer at track junctions while driving forward or in reverse

Electromagnetic Wagon Coupler

The electro-magnetic wagon coupler in the rear of the engine can be controlled via sensory inputs or remotely via the app

Lithium Battery

Delivers 100+ minutes of continuous play time, chargeable via the micro-USB port

Sounds & Light Effects

Programmable coloured LED head and tail lights, speaker and LED feedback lights (start, stop, faster or other actions)

Front & Rear Capacitive Sensor

Provides additional interactivity with the user and capacitive objects on the track

3-Axis Accelerometer

Provides precise information on the train's movement and aids its actions

Expandable

Compatible with most standard wooden train tracks

Software Overview

Intelino can be programmed in 4 different ways, to progressively learn to code from basic concepts to advanced programming.

Action Snap Commands

Start with tactile, screen-free coding with coloured tiles. Control the train's movement, speed, steering, stopping and wagon coupler.

App-Based Command Editor

Create custom action snap commands and route logic in our mobile app's Editor and download them instantly to the train.

Scratch 3.0

Use block-based programming in Scratch. Interactively program up to 2 trains to collaborate and avoid collisions.

Python

Text-based programming with Python allows to interactively control multiple trains. Start with basic sequential scripts and advance to event-based asynchronous programming.

Ozobot Bit+ Entry Kit

Discover the world of coding and robotics with the Ozobot Bit+ Entry Kit! Designed for beginners and educators alike, this kit introduces you to the exciting possibilities of programming Ozobot Bit+, a tiny but powerful robot that follows your commands using colour codes. The Entry Kit includes an Ozobot Bit+ robot, charging cable, marker pack, sticker sheet, all in a handy storage pouch.

Key Features

Screen-Free

Use markers or the add-on magnets to code your Bit+ robot

Two Ways of Coding

Code completely screen-free with the colour coding lines, and then advance to block-based coding.

Add-On Sets

With a range of STEAM add-ons, magnet sets, and more, you can now do more than ever with your Ozobot Bit+ robot

Durable

The Bit+ is small but durable with a strong polycarbonate shell

Wonder Workshop - Dash

Dash Educational Robot

The Wonder Workshop Dash robot helps students engage with technology in an open-ended and exciting way. The Dash robot can respond to voice commands, light up, move around, and can be expanded using a variety of add-ons.

Key Features

User Programmable LED's and Buttons

Customise your experience with Dash and let him light up.

IR Receivers & Transmitters

Enables Dash to find and interact with other robots.

Potentiometers & Dual Motors

Supports head pan tilt with accurate positioning.

3 Proximity Sensors

Detects objects left, right and back.

Real-time Bluetooth

Fast, easy connections to Apple iOS, Android and Kindle mobile devices.

3x Microphones & Speakers

Real-time voice triangulation and personalised recordings and playback.

3 Processors & Sensor Fusion

Managers complex interactions among actuators and sensors (accelerometer, gyroscope and wheel encoders).

2 Powered Wheels

Quick navigation and distance tracking on nearly any surface.

Built-In Lithium Battery

Super quick charge for minimal downtime as well as long battery life.

Software Overview

Program Dash with a variety of apps!

Blockly

Introduces fundamental and advanced coding concepts through playful projects and puzzles.

Wonder

Students create traceable paths of code, which help them see what their robot will do in a way that traditional code cannot. You can also program the robot to do multiple tasks in parallel.

Path

Program Dash to follow a path and unlock special abilities, sounds, and animations as you go forth and explore **Go**

Use this app as a remote control for your Dash and let it drive, light up, make sounds and tilt its head.

Swift Playground

Swift, created by Apple, is a powerful programming language that teaches students text-based coding through fun challenges.

Make Wonder Subscriptions

With Make Wonder, you can view solutions, curriculum, and teacher resources all in one place. Capture students' progress instantly and understand exactly where they get stuck. Guide students through activities for every concept.

What's Included?

Lesson Library:

Discover turnkey activities and lesson plans that can be applied across core subject areas. Search by subject, grade level, and robot/accessory to find the right cross-curricular content for your students' needs.

Dash's Neighbourhood:

Dash's Neighbourhood is an online simulator to practise with programming in a 3D online environment when students don't have access to a real Dash. Create projects with Dash's Neighbourhood using the same drag-and-drop programming language, Blockly, designed for Dash.

Sphero Indi - Robotic Car

The Take-Home-Kit (MG0529) includes the indi robot, 30 paper colour cards and beginner guide.

Key Features

Create Mazes

Let indi drive over the colour cards, each with its own function, and indi will perform the command on the card.

Screen-Free Option

An unplugged programming experience without the need for a screen.

On-board Colour Sensor

The colour sensor and colour tiles provide endless opportunities to build mazes that program indi to drive.

Lesson Content

Includes challenge cards and educator guide (included in the class pack MG0532).

Light up indi

Control indi's lights and choose between colours and light patterns.

On-Board Speaker

Control the sounds your robot makes and have indi play notes to songs as it passes over the colour tiles.

Software Overview

Sphero Edu Jr app

Simplified block-based programming to understand the basics of coding and computer science principles.

MG0529 Take-Home Kit

Sphero BOLT+

New

Sphero BOLT+

Sphero BOLT+

The Sphero BOLT is an advanced coding robotic ball with LED Matrix that's perfect for students from year 3, all the way to year 10.

Key Features

LED Matrix

Program your robot using code to display characters, vector graphics, sensor data, or play games on the matrix itself.

Waterproof Shell

Let BOLT swim in water or roll through paint IR Communication. Send messages to other RVR or BOLT robots.

IR Communication

BOLT to BOLT communication allows for new games and advanced movements like swarming.

Programmable Sensors

Built-in infrared, compass, light sensor, gyroscope, accelerometer and motor encoders.

Long Battery Life

2+ hours of battery per charge.

Inductive Charger

Simply place your BOLT on the cradle to charge the battery.

MG002P

New

Sphero BOLT+ Edu Power Pack

The Sphero BOLT+ Power Pack lets you charge, store, and carry 15 Sphero BOLT+ robots. Built with an integrated cooling system, your robots can charge safely all in one place. With more robots, a longer battery life (2+ hours), auto-aiming, and more, the BOLT+ Power Pack is the top of the line kit for educators using the Sphero Edu program in a classroom, robotics club, or in any maker environment you can dream up. The pack includes 15 Sphero BOLT+ robots, case with charging cradles, 15 maze tapes and protractors, 15 clear turbo covers, power cable, and a handy quick start guide.

MG002P-15

\$5,599.95

Sphero RVR+

RVR+ is Sphero's revolutionary take on the programmable robot and is optimized for the middle and high school classrooms and makerspaces. It's drivable right out of the box, packed with a diverse suite of sensors, and built for customization.

Key Features

Advanced Sensors

Packed with on-board sensors including an improved colour sensor allowing for more accuracy in programming RVR+ to see colours in its environment, a light sensor, IR, accelerometer, and gyroscope.

Enhanced Gearbox

The gearbox now has improved torque, payload capacity, and durability.

Build on It

RVR+'s customizable expansion plate lets you connect most third-party hardware including Raspberry Pi, Arduino, micro:bit, and Sphero's own LittleBits.

Software Overview

Using the Sphero Edu app students learning to code can program RVR+ with draw & drive, blocks, or JavaScript. RVR+ can also be programmed with Python using the Sphero Public SDK and API libraries for more advanced hackers and makers, making it the ultimate programming robot for coders of all levels.

SPHERO Computer Science Foundations Course

Computer Science Foundations (CSF) is a supplemental, standards-aligned curriculum designed to be taught in the classroom with all Sphero robots. Across 3 courses and 72 lessons, teachers and students will explore STEAM principles through creative coding. By the end of these courses, students will demonstrate a mastery of block programming by manipulating sensors, loops, conditionals, variables, and functions, and rewrite simple block programs in JavaScript. Includes a perpetual license to all digital student facing materials and content.

CS FOUNDATIONS COURSES

Teachables Robotics Mat – Warehouse Mat

Move pallets from the loading dock to the sorting bay, assembly area and storage bays without dropping the stock or creating a collision with other warehouse robots! Mat measures 160 x 210 cm.

TEB6273 **\$92.95**

only at
MTA

Teachables MTA Robotics Coordinates Whiteboard Mat

This Coordinates whiteboard mat features a 6 x 13 grid with A to F on one side and 1 to 13 on the other side. This allows students to locate a certain location on the grid. The mat is made of a write and wipe material, to be used with whiteboard markers. The mat measures a large 100 x 205 cm!

TEB6255 100 x 205 cm **\$123.95**

Sphero Accessories

Sphero Code 2-sided Mat - Space & Soccer

Explore new ways to learn and play with the Sphero Double-Sided Code Mats. The Sphero Code Mat seamlessly pairs learning with play. Perfect for educators, students, and parents. This two-sided mat offers a simple, accessible way to learn block-based coding, basic math principles, and collaborative problem-solving.

MG214-M Space & Soccer

\$349.95

Sphero Activity Mat 1

Take the most out of your Sphero's with this Sphero Activity Mat 1! This mat is designed to work with the Sphero SPRK+, Sphero Bolt, and the Sphero Edu platform. The mat is great to help students develop key coding skills, that are linked to everyday curriculum outcomes.

MG211

\$279.95

Sphero Activity Mat 2

The Sphero Activity Mat 2 is a robust, vinyl floor mat that measures 201 by 122 cm. The mat is perfect for classroom use as it has a surface that can be wiped clean. There are 4 complex mazes that can be reversed for 8 scenarios.

MG212

\$279.95

Sphero Golf Mat

This mat is designed to work with the Sphero SPRK+, Sphero Bolt, and the Sphero Edu platform. There are 6 reversible holes allowing students to complete 12 complex mazes. The Sphero Golf Mat measures 201 x 122 mm and is perfect for classroom use as it's easily wiped clean and has a tough wearing surface

MG213

\$279.95

Sphero Chariot - Blue

Put your round robot in the driver seat with the Sphero Chariot! Add another level of creativity to your Sphero by letting it carry cargo, making it the ultimate spy-bot by adding a phone to the custom carrier, or snapping on toy building bricks to design your own creation. Compatible with LEGO®.

Makeblock Education - mTiny

mTiny Discover Kit

mTiny is an emotive, screen-free robot perfect for introducing children from preschool all the way to year 5 the fundamentals of coding. Its unique Tap Pen Controller, as a coding tool, facilitates children's kinesthetic experience on tangible programming language. Totally screen-free, this robot allows for an immersive robotic experience.

Key Features

Multiple Intelligences

mTiny was designed with Multiple Intelligences Theory in mind. Logical thinking and problem solving skills can be fostered through interactive games that truly engage younger children at the level and pace they are capable of.

Interact with the Map for Fun and Learning

mTiny comes with a tap pen controller and an interactive map which distinguish it from other products. They are easy to use. Combined with a range of coding games for different levels, mTiny interacts with young children to spark their passion for discovery and learning. Through games, children develop their logical thinking and problem-solving skills, equipping themselves with lifetime learning abilities.

A Fusion of Cross-Curricular Contents

mTiny exposes young children to concepts such as math and music. Designed (in alignment) with modern educational philosophies in mind, mTiny finds a better way to spark children's curiosity for knowledge and develop their logical thinking from an early age.

Screen-Free Multisensory Learning

No external devices are required to work with mTiny, making it a screen free coding solution. mTiny enables children to engage different senses to increase attention and explore the world around them.

Makeblock Codey Rocky

Codey Rocky combines hardware with software, allowing children to learn about programming while they play and create. Using mBlock, a software which supports both blocked-based and Python programming, Codey Rocky takes children by their hands and leads them into the world of avant-garde technology with its inbuilt AI and IoT functionalities, giving them a competitive edge in the AI era.

Key Features

Brainy Codey

Integrated with over 10 programmable electronic modules, Codey Rocky has more features than it meets the eye. Students can design interesting applications, animations and games with Codey Rocky through programming and practical application of electronic module.

Emotive

Codey Rocky's light up facial expressions make it fun to interact with!

Agile Rocky

Not only will Codey Rocky swirl and follow lines but also go around obstacles, making creation so much more fun.

Get to know AI and IoT

Use mBlock to add Internet of Things functionality to Codey Rocky. Detect the soil humidity, control home appliances, get weather reports, and much more! mBlock supports AI-functionality including voice recognition, face recognition, and deep learning.

Software Overview

mBlock features many powerful functions while allowing programming to be as simple as assembling building blocks. The learning process is structured in a series of games of different levels making the process of learning to code a fun experience for students.

MB30243

\$247.45

Makeblock Education - mBot 2

Makeblock mBot2

The mBot2 is a next-generation educational robot designed with extended capabilities, starting as an entry-level solution and going all the way to upper high school and beyond. mBot2 is powered by CyberPi, an educational microcontroller enhanced with network capabilities, built-in sensors and much more. mBot2 is designed to carry out interactive, cross-curricular lessons that are reflecting real-world applications with cutting-edge technologies, including robotics, AI, IoT and Data Science.

Key Features

Powered by CyberPi

A powerful and versatile microcontroller for education. See next page for more information

Real-World Applications

Including robotics, AI, IoT and Data Science

Precision Control

The encoder motors can be precisely controlled by their rotation, speed and position

Ultrasonic Sensor

Including ambient illumination

Quad RGB Sensor

Uses 4 colour sensors simultaneously to detect colours and follow lines

mBot2 Shield

Compatible with a variety of external components and includes a built-in lithium battery

Enhanced Connectivity

Connect via Bluetooth or WiFi, and communicate with other mBot2's in the classroom

Onboard Inputs and Outputs

Packed with features such as a light sensor, microphone, gyroscope-accelerometer, full colour display, speaker and 5 RGB LED's

Software Overview

Students become confident coders while they transition from block-based to text-based coding at their own pace.

mBlock

A block-based programming language designed to help students understand the key concepts of programming, by dragging and dropping code blocks.

microPython

A seamless transition from block-based programming to microPython encourages students to learn high-level object-oriented languages. With just one click students can see the relationship between block-based and text-based coding.

Python 3

Explore powerful text-based programming in AI, IoT and Data Science and become a true problem solver and independent thinker.

iRobot Root

The iRobot Root is a robot designed to allow students of all skill levels to explore code while unleashing their creativity. iRobot Coding allows learners to progress from graphical coding, to hybrid coding to text coding. Each robot comes with a charging cable, 2 dry erase markers, a microfibre cloth, a fold-out whiteboard and set of vinyl stickers.

Key Features

32 Colour Sensors

Detect colours across the RGB to follow paths, dodge obstacles, or even become a musical instrument

4x Capacitive Touch Zones

Root recognises which zone is pressed and will follow the commands

2x Front Bumpers

Help your robot navigate its space by bouncing off objects

2x Light Sensing Eyes

Assist with navigation and object detection by detecting light that reflects off objects

2x Drive Motors and Wheel Encoders

Accurately let your Root move forwards, backwards and even in circles

3-Axis Gyroscope & 3D Accelerometer

Root can detect the orientation and acceleration of its movements

Battery Level Monitor

Never run out of battery again and charge before it's empty!

4x Large Multi-Colour LEDs

Code the robot to glow, blink or flash the colours of the rainbow

Piezoelectric Speaker

Play music and turn your robot into musical instruments by composing robot melodies

Marker Lift & Drop Motor

Code Root to raise or lower markers so it can draw while it drives

Eraser Lift & Drop

Start with a clean slate by erasing the whiteboard surfaces

Magnetic Belly

Race up, down, and across magnetic whiteboard surfaces using Root's magnetic belly

Software Overview

Featuring three progressive Learning Levels! It also includes a free online simulator to allow students to test their code before trying it in real life.

Graphical Coding

Use drag-and-drop, graphical blocks to teach the fundamental logic skills of coding. No reading skills required!

Hybrid Coding

Build coding fluency by introducing hybrid blocks that feature a mix of graphics and coding script.

Full-text Coding

Use full-text code to teach the structure and syntax of professional coding languages, including Python.

Edison Robot v3

Introducing the improved Edison Robot, an affordable robot for effective, engaging and enjoyable coding education.

Improvements

Rechargeable Battery

With over 60 minutes of uninterrupted driving time

USB Programming

Connects directly to a computer via USB

Charging Options

Can be charged from any USB-A powered source and compatible with EdCharger

Key Features

Record/Stop/Play Button

Program the robot and then run and stop those programs in Edison

Line Tracking Sensor

Let Edison see the difference between dark and light surfaces

Sound Sensor/Buzzer

Detect sounds as sensor and make noise as buzzer

Motors

Two motor outputs turn Edison's wheels, together or individually to allow turning specific angles or pivoting on the spot

Lights

Two red LED lights which can be programmed to turn on or off independently

Light Sensor

Let Edison detect and measure visible light

Obstacle Detector

Detect and react to obstacles using infrared light

Remote Control Receiver

The infrared light sensor allows Edison to detect infrared light, including IR sent from remote controls

IR Messenger

Let Edison emit and detect infrared light to send and receive infrared messages

Software Overview

Edison's robotic capabilities can be programmed in four ways:

Barcodes

Edison scans unique barcodes to activate pre-set programs in the robot

EdBlocks

EdBlocks is a fully graphical programming language which uses simple drag-and-drop blocks

EdScratch

Easy drag-and-drop programming with powerful functionality and versatility, EdScratch is a robust platform for computer science education

EdPy

Text-based EdPy teaches students the core of a real-world programming language, empowering them to explore robotics and coding at a more advanced level

The EdMat is an A1 size (59 x 84cm) robot activity mat and has 6 barcodes that activate Edison's pre-programmed features and a track for Edison to follow.

EDM002M 59 x 84 cm **\$59.95**

HP-Otto Robot

Take students through designing, 3D printing, building, and programming their first functional robot with Otto! Otto is the first member of HP Robots family, a small modular robot that you can build and program not one, or two but multiple robots! Packed and tested for you to have all tools and parts at hand, for a smooth building experience. Show students the the applications of design thinking, circuitry and coding with HP-Otto. The Creator model contains the electronics and accessory pieces, and your students get to print the body of the robot. The Builder model comes with everything you need to build your robot from scratch, no 3D printer required!

Key Features

Modular, Programmable Robot

Customizable and versatile design allows you to easily reconfigure and program the robot to suit various tasks and projects.

3D Printing Ready

Designed with the flexibility to allow students to use 3D printers to create and customize their own robot parts with free files available for download

Integrated Components

Features an integrated buzzer for audible alerts, a switch for power control, a booster for signal enhancement, and a battery level indicator to monitor charge status.

Lithium Battery

Includes a rechargeable lithium battery with USB-C connectivity for convenient charging and extended operational time.

Continuous Rotation Servo Motors

Equipped with high-performance continuous rotation servo motors featuring a metal gearbox for robust and reliable movement.

Connectivity

Advanced circuit board with integrated Bluetooth and Wi-Fi capabilities for seamless communication and control. Features fast and easy-to-use plug connectors for effortless assembly and connection.

Lights

Programmable RGB LED lights on the head and eyes, allowing you to customize lighting effects and enhance visual feedback.

Sensors

Two line tracking sensors with both analog and digital outputs for precise line following. Includes an ultrasonic sensor for effective obstacle detection and avoidance.

Software Overview

- Programmable with our own web code ecosystem that runs in directly in the browser for all OS without any installation.
- Graphical coding with beginner blocks mode like in Scratch Jr.
- Code preview and Python editor.
- Compatible with C++ using Arduino IDE.
- Backwards compatible with Otto DIY code.

OTTO-C Creator	\$278.45	OTTO-B Builder	\$329.95

Rechargeable MaQueen Plus

The MaQueen Plus V2 is an accessible STEAM robot teaching tool for primary and secondary students. It utilizes the micro:bit as its computational base (not included).

Key Features

Supports HuskyLens AI Vision Sensor

Turn your MaQueen Plus into an AI robot.

Multiple Expansion Ports

Three servo ports, 12 IO expansion ports and support for installation of the HuskyLens camera.

6 Line-Tracking Sensors

To allow for complex routine programs and complicated maze algorithms, supports line-tracking sensor calibration and analogue readings.

High Endurance 18650 Battery

Powered by rechargeable lithium battery (not included).

Built-In Inputs and Outputs

Includes buzzer, encoder motors, ultrasonic sensor, 6 line tracking sensors, 3 servo ports, power display and large RGB LED.

Aluminium Chassis

A robust and stable design to allow for connection to add-on sets such as Mechanic or HuskyLens.

Upgraded Version

Better power management and supply, a larger chassis, more built-in functions and more expansion ports.

Software Overview

From beginning coders to advanced programmers, micro:bit can be programmed by a programming tool that is right for your students.

Microsoft Makecode

Perfect for the beginner, the colour-coded blocks are familiar to anyone who's previously used scratch. Switch to JavaScript to see the text-based code behind the blocks.

Scratch

Loved by many teachers and students all over the world, integrate your micro:bit into Scratch projects. You'll need a laptop or computer with Bluetooth and Scratch Link installed.

Python

Deepen programming skills through text-based coding. Easy to start learning, yet powerful enough to be used in areas like data science and machine learning.

Learning Lab Robotics Workshop for Microbit

Learning Lab is a series of construction-based learning sets which include lesson plans for classroom implementation. This set is designed for use with the micro:bit, to build models that are interactive and programmable. The Robotics Workshop set for micro:bit includes 259 components to build 18 models and 4 creative works.

Key Features

STEM Tool

Combine engineering with programming and coding and learn about electromagnetic induction, mechanical structures, transmissions, radio frequency, IR sensors.

Buzzer

Program your model to make sounds.

Button

A programmable button to instruct your model to start a program.

180 Degree Servo Motor

Let your model move around by combining the servo motors to wheels.

Line Sensor

Allows your model to follow lines.

LED Lights

Create a traffic light, or let your model light up!

Force Sensor

Allows to measure compression, force, strain and load

micro:bit Shield

The Robotics Workshop is controlled by micro:bit.

Lesson Plans

The set includes a student book and teacher guide (downloadable) to get started with ease.

Software Overview

The Robotics Workshop can be programmed with MakeCode, Javascript Blocks Editor and MicroPython.

Makecode

The software is compatible with micro:bit to lets students start their coding experience with block-based coding.

JavaScript Blocks Editor

The Microsoft online graphical coding platform can be used without having to download coding tools. A 14-week introductory course is available for the Robotics Workshop.

MicroPython

A text-based programming language to take your students' coding journey to the next level.

CoDrone EDU

Welcome to CoDrone EDU, the revolutionary educational platform that equips students with the tools to learn coding and robotics. Code it in Python or start from the basics with block-based coding. With its colour sensors, a front and bottom range sensors, and access to 7 sensors make it an excellent learning tool and a great way to learn coding and engineering skills in the classroom and for competitions. Suitable for students aged 12 years and over.

Technical Specifications:

7 Sensors: Gyroscope, accelerometer, barometer, optical flow, bottom range, front range, floor colour sensor.

Coding/Programming: Blockly and Python

Coding Compatibility: Chromebook, Windows and MacOS computers with a USB port

Controller Compatibility: Includes controller with display

Drone Rechargeable Battery: 7-8 min flight time, 60 mins charge time

Range: 50 Meters

Controller Power: Micro-USB or non-rechargeable 2 * AA batteries (do not use both)

Micro:bit

BBC micro:bit V2

The versatility of the micro:bit allows it to be scaled from ages as young as 7 years old, all the way through to university and beyond. Thanks to this affordable platform, students all over the world are able to learn the skills of the future such as critical thinking, problem solving and entrepreneurship. micro:bit helps students become confident coders! The micro:bit Go Bundle includes the micro:bit board as well as a USB cable, battery holder, and batteries. The micro:bit is compatible with a range of other 3rd party hardware.

25 LEDs

A 5x5 LED grid to display pictures, words or numbers. They can also act as light sensors.

2 Buttons

Program the two buttons on the front separately or together to make things happen.

Touch Logo

The touch sensor can function as an additional input button.

Microphone

Monitor sound levels or allow sound to enter the microphone.

USB connector

Download programs to your micro:bit from a computer and power it using its USB interface. Radio & Bluetooth antenna. Communicate to other micro:bits by radio, or with other devices via Bluetooth.

Processor

Its brain, fetching, decoding and carrying out your instructions. Speaker. Add music and new sounds to your projects.

Battery socket

Instead of powering your micro:bit from the USB socket, you can unplug it from your computer and use a battery pack instead. Temperature Sensor. Measure how hot or cold your environment is.

Pins

Connect your micro:bit to headphones, simple switches and electronics or power simple accessories like lights, motors and robot.

Compass

Find magnetic North or measure the strength of magnetic fields.

Accelerometer

Measures forces in 3 dimensions, including gravity, so your micro:bit always knows which way is up. Edge connector for accessories. Connect your micro:bit to one of the many compatible add-on resources!

Makey Makey - Classic

The Makey Makey is an invention kit that allows student's imaginations to run free. It works through opening and closing circuits - plug in, clip on and let the inventions start! No software needed, the Makey Makey sets can work directly with computers (via USB connection). There are thousands of online lesson ideas and courses online to support your Makey Makey activities. You can even turn everyday objects into touchpads and connect them to the internet to build sensors, a controller and much more! Each Set kit includes 1x Makey Makey Board, 1x USB Cable, 7x Alligator Clips, 6x Connector Wires, Instructions with Visual Project Start Guide, Online Documentation, and 20x Colour Stickers. Connects via USB (Not compatible with iPads or tablets).

Coding Kit

Twin Science Coding kit is a LEGO compatible STEM tool designed to develop students' natural creativity and teach kids the fundamentals of computer programming through fun and interactive projects by combining hardware and software. Included: Coding module, buzzer, servo motor, ultrasonic sensor, USB cable and jumper cables, plus user manual.

Twin Coding is a programming platform that uses block-based coding to bring your Twin Science models to life. The Twin App allows students to share their projects with their peers; explore new topics through a vast library of DIY challenges (projects & experiments related and unrelated to activities found in the STEM Kits); discover fun facts while competing in a game of trivia; and go on learning adventures. It is a mobile application that provides students. STEAM while imparting 21st century skills through DIY projects, educational mini games, live quiz shows, animations and more.

Umety

VR Headset

Experience the future of learning with Umety VR headsets! These VR headsets are designed with education in mind and are set to transform classroom lessons and assessments, making learning an engaging and interactive adventure. The Umety VR headset is designed for classroom as seen in features such as the removable silicon cover which allows for easy cleaning, the choice of sound via speakers or 3.5mm audio jack, wireless controller, and a fully adjustable headstrap so that it can suit any student. Headsets can also be used without wifi once content is loaded on the device, reducing the reliance on internet connections. Please note, a subscription package is needed to access the content on this device (demo content can be accessed without the subscription).

Key Features

- 128 GB ROM, 6 GB RAM
- Qualcomm Snapdragon XRI chipset (VR)
- Android 8.1
- 2.5k Fast-LCD HD screen
- 4000mAh
- Integrated surround sound system and 3.5mm audio jack
- Long Battery life
- Wireless controller
- MicroSD Card slot for expandable storage
- Removable silicon cover for easy cleaning between use

Simulated Autonomous Manufacturing

Rotrics DexArm Robotic Arm

The Rotrics DexArm Kit is an all-in-one, multifunctional robot arm that can be used for a variety of STEM applications. Rotrics DexArm is a 4-axis desktop robotic arm with modular design, and 0.05mm high repeatability. A number of “click-in” modules are included in this set: 3D printing, laser engraving, rotary soft gripper, rotary suction cup, and pen holder. DexArm gives students an intuitive and interactive way to control and bring their ideas to life in just a few clicks with the software. Also, an API is provided for experienced developers to control DexArm in Processing, Python, and G-code. To make controlling even easier, the 3.5-inch touchscreen controller allows students to check the status and command DexArm within their hand.

TeacherGeek

TeacherGeek Makerspace Trolley

The ultimate STEM Toolbox for every activity, build or project. The TeacherGeek Makerspace Trolley not only comes with more components than you can dream of, there are also over 40 project-based activities ready to go. Start with the build guide, move on to optional labs and additional challenges. The great thing is that all components are designed to work and fit together. Students will learn science and engineering concepts through experimentation, grow their understanding and evolve projects through the design & engineering process.

K'NEX Introduction to Simple Machines

STEM Education focuses on science, technology, engineering and mathematics concepts taught through problem-solving, discovery, exploratory learning and critical thinking. These K'NEX models offer hands-on learning opportunities that supports these learning outcomes. The inquirybased lessons challenge students as they build, investigate, problem solve, discuss, and evaluate scientific and design principles in action. Each set comes with teacher's guide. Find more information about each individual set on our website.

MTA

MTA Interactive Flat Panel for Education

Designed specifically with teachers in mind, the MTA Interactive Flat Panel is packed with innovative features designed to allow you and your students to display and interact with content like never before! Available with a range of mounting opens, contact your MTA rep to discuss the ideal solution for your classroom space.

Key Features

Smooth writing: The reduced thickness of the space between the screen and panel makes it feel like you are writing on paper.

Ultra-high Definition: Crystal clear views with 4K resolution delivers astonishing imagery.

Responsive Touch: 10 millisecond response time to instantly bring your ideas to life on the whiteboard.

Easy Access to the Cloud: Log into your Google or Microsoft account with easy for a safer, more efficient and personalised experience. Access all your documents quickly.

Screen Sharing: Wirelessly connect up to 9 devices at the same time. Scroll down for more information about screen sharing on the MTA Interactive Flat Panel.

Two-Way Collaboration: Mobile devices can be operated both from the panel or used directly to manage writing, annotation and presenting on the panel.

Share Application: Teachers can invite students to join interactive activities via QR code, or enter a pin on their device.

Shortcut Tools: Find the apps and files you need quickly to keep your lessons running smoothly. The system bar is customisable, so you can keep your most commonly used tools at your finger tips.

Front Facing Speakers: No need for an additional soundbar.

Front Facing Ports: Connect other devices via HDMI or USB C from the front of the panel.

Technical Specifications:

- Front-facing USB ports (1xUSB-C and 2xUSB-A)
- Front-facing HDMI Port
- Front-facing speakers (2x 16W)
- 4K ultra-HD display
- IR (infrared ray) touch technology
- 40 touch points
- Response time ≤10ms
- Writing height ≤3mm
